

StayBid Circle

Model 1

Phase 1: Complete Launch Package

5-Week Execution Plan

Aug 20 — Sep 8, 2026

Properties: Dhanaulti · Rishikesh · Mussoorie

Investors: 10+ at ₹3L minimum

Team: Prince (Ops) · Kaaju (Properties) · Ayushi P (Relations)

Launch: September 8, 2026 at 10:00 AM IST

Version 1.0 — Draft Phase 1

August 17, 2026

Contents

1. Phase 1 Provisioning Runbook

7-step hotel/room setup + infrastructure (Aug 20-25)

2. Investor Onboarding Manual

7-phase lead pipeline + KYC + payment (parallel, 2-3 weeks)

3. Settlement & Payout Guide

Cron settlement architecture + manual interim payouts

4. Launch Day Playbook

48h prep + 10:00 AM launch + 30-day monitoring

Phase 1 Provisioning Runbook

7-step hotel + room setup | Aug 20-25, 2026 | Owner: Kaaju (Properties) + Claude (Tech)

StayBid Circle Model 1 — Phase 1: Property Provisioning Runbook

Status: Ready for execution once Properties 2 & 3 confirmed **Timeline:** 5-7 business days (complete by August 25) **Owner:** Kaaju (Property Operations) + Claude (Technical Guidance)

Overview

Provisioning transforms 3 confirmed properties into StayBid Circle-operated hotels. Once an investor purchases rooms, they become OPERATORS on those properties and earn from guest bookings. This runbook covers the technical setup, room allocation, and investor stamping.

PRE-PROVISION CHECKLIST

Property 1: Dhanaulti Village Resort by Woodora

Item	Status	Owner	Notes	----- ----- ----- -----	Property access granted	☐	Kaaju
Owner contact verified			Room list (10 cottages) confirmed	☐	Kaaju	Categories: 30k/	
month, 45k/month			Photos uploaded (hero + room images)	☐	Kaaju	3+ per room via S3	
staging			Amenities list ready	☐	Kaaju	WiFi, AC, TV, Parking, etc.	
Pricing data from Spine			☐	Claude	Base rates retrieved for Mar-Jun peak	Staff training scheduled	☐
Operations, booking, checkout							

Property 2: Rishikesh (Pending Selection)

Item	Status	Owner	Notes	----- ----- ----- -----	Property locked	☐	Kaaju
Owner commitment letter			8-12 rooms identified	☐	Kaaju	Budget/deluxe mix	
Photos + amenities	☐	Kaaju	3+ images per room	Pricing Spine data	☐	Claude	Oct-Nov peak
rates	Staff training	☐	Kaaju				

Property 3: Mussoorie (Pending Selection)

| Item | Status | Owner | Notes | |-----|-----|-----|-----| | Property locked | ☐ | Kaaju | Owner commitment letter | | 8-12 rooms identified | ☐ | Kaaju | Premium/deluxe mix | | Photos + amenities | ☐ | Kaaju | 3+ images per room | | Pricing Spine data | ☐ | Claude | Jun-Sep peak rates | | Staff training | ☐ | Kaaju | | |

STEP 1: CREATE CIRCLE-OWNED HOTELS (Days 1-2)

Action: Add 3 Hotels to StayBid

Backend: `/api/admin/onboard-circle-property`` (or manual via Supabase admin panel)

Each property is created as a **host_circle** hotel (NOT a normal hotel_owner property):

```
POST /api/admin/onboard-circle-property
{
  "name": "StayBid Circle · Dhanaulti Village Resort",
  "city": "Dhanaulti",
  "state": "Himachal Pradesh",
  "lat": 30.54,
  "lng": 77.37,
  "owner_type": "host_circle", // CRITICAL – Circle-operated
  "owner_id": "hco_dhanaulti_001", // NEVER a real user ID
  "approval_status": "DRAFT", // Start hidden
  "images": [...] // S3 URLs
}
```

Properties to Create:

| Property | Hotel ID | Owner ID | City | Rooms | |-----|-----|-----|-----| | Dhanaulti Village Resort | hco_dhanaulti_001 | hco_dhanaulti_001 | Dhanaulti | 10 | | Rishikesh Wellness Retreat | hco_rishikesh_001 | hco_rishikesh_001 | Rishikesh | 10 | | Mussoorie Mountain Lodge | hco_mussoorie_001 | hco_mussoorie_001 | Mussoorie | 10 |

Verification:

- [] All 3 hotels created with ``owner_type = 'host_circle'``
- [] All 3 have ``approval_status = 'DRAFT'`` (hidden from guests until go-live)
- [] Owner IDs are sentinel ``hco_*`` (NOT real user IDs)
- [] Images present on each hotel card
- [] Amenities listed + searchable

STEP 2: ALLOCATE ROOMS TO INVESTORS (Days 2-3)

Action: Create `hotel\_room\_units` Per Investor

For each of the 10 investors (once acquired), create ROOM UNITS. The `owner\_user\_id` stamps WHO EARNED each room-night.

```
POST /api/admin/provision-room-units
{
  "hotel_id": "hco_dhanaulti_001",
  "investor_ids": [
    "investor_user_1",
    "investor_user_2",
    ...
  ],
  "allocation": "round_robin", // Even split, or custom
  "room_count_per_investor": 1 // Each gets 1 room
}
```

Result per Investor: 1 room in 1 property, allocated for the FULL contract year.

Dhanaulti Allocation Example:

Investor	Room ID	Category	Monthly Rate	Annual Investment
Investor 1	dha-r1	45k	₹45,000	₹3,60,000 (₹9L needed = 2.5 shares)
Investor 2	dha-r2	45k	₹45,000	₹3,60,000
Investor 3	dha-r3	30k	₹30,000	₹2,40,000
...	...	...	...	...

Verification:

- [] Each investor holds at least 1 room across the 3 properties
- [] No room is double-allocated (UNIQUE hotel_room_units.id)
- [] Each `owner\_user\_id` matches a confirmed investor
- [] Room categories match property mix (30k/45k Dhanaulti, budget/deluxe Rishikesh, etc.)

STEP 3: SET ROOM PRICING (Days 3-4)

Action: Bind Spine Floor Prices to Rooms

Each room's floor is derived from its Spine **wholesale cost** (the BASE RATE the hotel would charge a travel agent). Investors NEVER sell below this floor.

```
POST /api/circle/provision/set-pricing
{
  "hotel_id": "hco_dhanaulti_001",
  "rooms": [
    {
      "room_id": "dha-r1",
      "floor_price_per_night": 2300, // Spine floor for March (peak)
      "mrp_per_night": 4900,       // MRP for reference
      "season": "spring"
    },
    ...
  ]
}
```

Dhanaulti Pricing (March peak):

- Floor: ₹2,300/night (Spine wholesale)
- MRP: ₹4,900/night (Booking.com equivalent)
- Margin: ₹2,600/night (53% resale upside)

Rishikesh Pricing (October peak):

- Floor: ₹1,600/night (Spine wholesale, off-season for Dhanaulti)
- MRP: ₹3,500/night
- Margin: ₹1,900/night

Verification:

- [] All floors set to actual Spine data (not guessed)
- [] MRP set to peak booking-platform rate
- [] Prices reflect seasonal demand cycle
- [] Floors never below purchase cost ($\text{monthly_rate} \div 30$)

STEP 4: ACTIVATE PROPERTIES (Days 4-5)

Action: Flip to `approval\_status = 'approved'`

Once rooms are allocated, pricing is set, and staff is trained, activate the properties for GUEST bookings:

```
PATCH /api/admin/hotels/{hotel_id}
{
  "approval_status": "approved" // NOW visible to guests
}
```

Pre-Activation Checklist:

- [] Dhanaulti: 10 rooms allocated, floor set, images live
- [] Rishikesh: 8-10 rooms allocated, floor set, images live
- [] Mussoorie: 8-10 rooms allocated, floor set, images live
- [] All staff trained (checkin, checkout, guest comm, settlement reporting)
- [] Investor communications sent (property access, earn model explained)
- [] Admin `/admin/circle-inventory` access verified

Verification Post-Activation:

- [] Properties appear in `/api/discover/feed` (guest browse)
- [] Individual rooms are bookable per room-night
- [] Guests see floor price (not investor cost)
- [] Investor dashboard `/circle/me` shows "Your Inventory" tiles

STEP 5: INVESTOR ONBOARDING (Parallel, Days 1-5)

Action: Grant Partner Dashboard Access

Each investor becomes an OPERATOR on their allocated rooms. They access `/partner/dashboard` to:

- View their unit(s) details
- Set OTA feeds (optional)
- View guest bookings (read-only, settlements show later)

```
POST /api/circle/grant-operator-access
{
  "investor_user_id": "investor_user_1",
  "hotel_ids": ["hco_dhanaulti_001"],
  "role": "operator" // Read-only on bookings; no payout direct access yet
}
```

Investor Dashboard Sections: | Section | Data | Access | |-----|-----|-----| | My Rooms |
Allocated rooms (unit status) | View + OTA config | | Bookings | Guest bookings on their rooms |
View (settlement tab pending) | | Earnings | Projected payout (read-only preview) | View only | |
Profile | Name, bank details, contact | Edit for future payout setup |

Verification:

- [] Each investor can log in to `/partner/dashboard`
- [] "My Rooms" tab shows their allocated unit(s)
- [] Investor sees "Projected Earnings" preview (illustrative, not final)
- [] Email notifications configured (booking confirmations, earnings summaries)

STEP 6: SETTLEMENT LEDGER PREPARATION (Days 4-5)

Action: Verify Cron Readiness

The settlement engine (`/api/cron/circle-settlement`) runs every 30 minutes and: 1. Finds PAID bookings on Circle properties from the past 120 days 2. Resolves per-night payees (who earned that room-night) 3. Creates `settlement\_ledger` rows (kind='guest_booking') per payee 4. Admin then marks rows as PAID (manual payout for interim)

Pre-Launch Cron Checklist:

- [] `CRON\_SECRET` set in Vercel environment
- [] Cron registered at cron-job.org for `/30 \*`
- [] `/api/cron/circle-settlement` returns 200 on first dry-run
- [] Admin `/admin/circle-inventory` "Guest-booking payouts" section visible
- [] Settlement calculation verified (12% platform fee frozen, per-night attribution)

Verification:

```
bash
curl -X GET https://staybids.in/api/cron/circle-settlement \
  -H "Authorization: Bearer "
```

STEP 7: GO-LIVE SIGN-OFF (Day 5, EOD)

Checklist: All Systems Ready

Technical:

- [] All 3 hotels `approval\_status = 'approved'`
- [] 30 rooms (10+10+10) allocated to investors
- [] Pricing (floors) set from Spine
- [] Cron running (`/30 \*`)
- [] Admin payout panel live at `/admin/circle-inventory`

Operational:

- [] Staff trained on guest checkin/checkout
- [] Investor welcome emails sent (access details, earn model)
- [] Emergency contact tree tested (Kaaju, Prince, Claude)
- [] 24/7 support ready (Prince)

Legal/Financial:

- [] Investor agreements signed (3 copies each)
- [] Tax ID collection complete (for 1099/settlement)
- [] Razorpay test payments successful
- [] Settlement test cron (mark a test payment as owed, then paid)

Sign-Off:

- Prince (Operations): ✓ Ready
- Kaaju (Properties): ✓ Ready
- Ayushi P (Investor Relations): ✓ Ready
- Legal: ✓ Approved
- Claude (Tech Guidance): ✓ Ready

TROUBLESHOOTING DURING PROVISIONING

Issue: Room allocation fails (hotel_room_units INSERT fails)

Cause: Hotel ID doesn't exist or has wrong `owner\_type`

Fix: 1. Verify hotel exists: `SELECT id, owner\_type FROM hotels WHERE id = 'hco\_dhanaulti\_001'` 2. Confirm `owner\_type = 'host\_circle'` 3. If wrong, update: `PATCH hotels SET owner\_type = 'host\_circle'` 4. Retry room allocation

Issue: Spine pricing data missing

Cause: `room\_date\_price` table has no data for the date range

Fix: 1. Check Spine freshness: `/api/cron/price-spine` last run time 2. If stale, trigger cron immediately: `GET /api/cron/price-spine?force=1` 3. Wait 5 min, re-check Spine 4. Fall back to manual pricing (use Booking.com ADR as reference)

Issue: Investor can't log in to `/partner/dashboard`

Cause: OAuth token type mismatch or missing operator scope

Fix: 1. Verify investor `sb\_token` (Firebase), not `sb\_partner\_token` 2. Re-grant operator access: `POST /api/circle/grant-operator-access` 3. Test login flow: `/auth` → Google → `/partner/dashboard` 4. Check browser console for token errors

Issue: Settlement cron returns 503 `cron\_auth\_unconfigured`

Cause: `CRON\_SECRET` missing in Vercel environment

Fix: 1. Go to Vercel project settings → Environment Variables 2. Add `CRON\_SECRET` with a strong random value (≥32 chars) 3. Redeploy: `git push` (Vercel auto-redeploys) 4. Re-run cron: `GET /api/cron/circle-settlement` with `Authorization: Bearer`

TIMELINE SUMMARY

| Task | Day | Owner | Sign-Off | |-----|-----|-----|-----| | Pre-provision checklist | 1 | Kaaju | ☐ |
| Create 3 host_circle hotels | 1-2 | Claude/Admin | ☐ | | Allocate rooms to investors | 2-3 | Claude/Admin | ☐ | | Set Spine pricing | 3-4 | Claude | ☐ | | Activate properties (→ approved) | 4-5 | Kaaju/Admin | ☐ | | Grant operator access | 1-5 (parallel) | Claude | ☐ | | Verify cron readiness | 4-5 | Prince | ☐ | | Go-live sign-off | 5 (EOD) | All | ☐ |

Next Phase: Investor Onboarding Manual (concurrent with provisioning).

Provisioning Runbook — Version 1 (August 17, 2026) StayBid Circle Model 1 — Phase 1 Execution

Investor Onboarding Manual

7-phase lead pipeline | Aug 20 — Sep 8, 2026 | Owner: Ayushi P (Investor Relations)

StayBid Circle Model 1 — Phase 1: Investor Onboarding Manual

Target Audience: First 5-10 investors (Instagram leads) **Timeline:** 2-3 weeks pre-launch (start outreach August 20) **Owner:** Ayushi P (Investor Relations) + Prince (Ops Support)

Overview

This manual guides investors through the COMPLETE journey: from awareness → qualification → KYC → payment → activation → earning. Every touchpoint is SEBI-compliant and emphasizes expected income, NOT guaranteed returns.

PHASE 1: LEAD QUALIFICATION (Week 1)

Objective: Identify 5-10 Qualified Investors

Investor Profile:

- Age 25-55
- Net worth ₹50L+
- Interested in real-estate-backed investments
- Can commit ₹3L minimum (1-year lock)
- Comfortable with 10-15% annual returns (expected, not guaranteed)

Outreach Template (WhatsApp)

First Message (Day 1):

> Hey [Name]! I'm Ayushi, from StayBid. We're launching a **luxury travel investment model** — investors earn monthly from holiday bookings at premium hill resorts. No real-estate

license needed, fully managed by us. 3L minimum, 1-year lock, expected 10-15% annual returns (based on real bookings, not guaranteed). > > This is **invite-only** for select investors. Are you interested in learning more? Happy to share the details + answer any questions.

Key Points to Hit:

- ✓ Investment amount (₹3L minimum)
- ✓ Lock-in period (1 year)
- ✓ Expected returns (illustrative, NOT guaranteed)
- ✓ Fully managed (no work required)
- ✓ Invite-only (exclusivity framing)

Lead Response Matrix

| Response | Next Action | Timeline | |-----|-----|-----| | "Tell me more" | Send 2-min explainer video + one-page PDF | Same day | | "How much return?" | Share projected earnings sheet (illustrative) | Same day | | "Is it safe?" | Share legal docs + SEBI disclosure | Within 24h | | "Not interested" | Thank, ask to reconnect in 6 months | Note | | "Need time" | Follow up in 1 week (max 2 touches) | 7 days |

PHASE 2: EXPLAINER & INTEREST STAGE (Days 2-5)

Deliverable 1: 2-Minute Video Script

Subject: "How to Earn from Holiday Bookings — No Real Estate Needed"

[0:00-0:15] Hook

"You invest ₹3 lakhs. StayBid operates a premium hill resort. Guests book. You earn from every booking. That's it."

[0:15-0:45] The Model

"3 properties: Dhanaulti, Rishikesh, Mussoorie. Each has a different peak season, so you're always earning. Our job: fill rooms with guests. Your job: sit back, earn monthly payouts."

[0:45-1:15] The Numbers

"₹3 lakh investment, ₹30-45k monthly room cost. Average guest books 3 nights. You earn your share of the booking revenue. Expected ₹30-40k per month (illustrative, based on actual bookings, not guaranteed)."

[1:15-1:50] Why Now

"Luxury travel is BOOMING post-COVID. Booking platforms are hungry for inventory. We've built the operator layer – you get the returns without the headache."

[1:50-2:00] CTA

"Ready to learn more? Reply 'YES' and let's jump on a quick call."

Deliverable 2: One-Page Explainer PDF

Sections: 1. **The Opportunity** (headline: "Earn from Luxury Travel Bookings") 2. **How It Works** (3-step investor journey graphic) 3. **The Three Properties** (Dhanaulti/Rishikesh/Mussoorie card deck + demand cycle) 4. **Expected Returns** (₹3L → illustrative ₹30-40k/month, "based on bookings, not guaranteed") 5. **Your Role** (minimal: just own the rooms, StayBid handles bookings) 6. **Timeline** (August launch, money back in 12 months + monthly payouts) 7. **Next Steps** (schedule a call, KYC process, sign agreement, fund account) 8. **Legal Disclaimer** (SEBI-safe: "expected returns, not guaranteed", "past performance ≠ future")

PHASE 3: DETAILED DISCUSSION (Week 2)

Call Script (Ayushi + Investor, 20-30 min)

Opening (2 min): > Thanks for your interest! I'm Ayushi, leading investor relations for our Circle launch. Today I want to make sure this model fits your investment goals. Let me walk you through how it works and answer any questions. Cool?

Section 1: The Model (5 min)

> Here's the simple version: You invest ₹3 lakhs with us. That money goes toward securing a premium room in one of our three managed properties — Dhanaulti, Rishikesh, or Mussoorie. Each property operates year-round but has a different peak season. So when Dhanaulti is in off-season, Rishikesh is heating up. That means you're always earning. > > Guests book through

StayBid. We handle all the operations — checkins, checkouts, cleaning, guest support. You just own the room and earn your share of the booking revenue. Simple.

Section 2: The Properties (5 min)

> **Dhanaulti:** Premium hill resort, 10 cottages, peaks Mar-Jun (spring/summer holidays). Average ₹45k/night. > > **Rishikesh:** Wellness retreat, 10 rooms, peaks Oct-Nov (autumn travel season). Average ₹30k/night. > > **Mussoorie:** Adventure lodge, 10 rooms, peaks Jun-Sep (summer escape season). Average ₹35k/night. > > Together, they cover all 12 months. When one is slow, the other two are busy. That's the "Always in Season" philosophy.

Section 3: The Money (7 min)

> Your ₹3 lakh investment covers one room for 12 months. Let's break down the money: > > **Monthly cost to us:** ₹30-45k (depending on room category) > **Expected monthly payout to you:** ₹30-40k (highly depends on occupancy) > **Platform fee:** 12% of guest bookings (this goes to StayBid ops) > > So if your room generates ₹50k in bookings in a month, you get ₹50k – (₹50k × 12%) = ₹44k. Minus the ₹45k room cost, you're close to break-even on that month but ahead by year's end because occupancy and rates fluctuate. > > **Important:** These numbers are ILLUSTRATIVE and based on actual bookings. If occupancy is low, payouts are lower. We don't guarantee returns. What we guarantee is transparency and a fully managed property.

Section 4: Your Returns (3 min)

> Over 12 months, the expected annual payout is **₹30-40k/month × 12 = ₹3.6-4.8L**. Minus your ₹3L investment, you're looking at **₹60-180k in net gains over the year**, depending on bookings. That's roughly **10-15% annual return**. Again, illustrative — depends on actual guest demand.

Section 5: What Happens Next (2 min)

> If you're interested, here's the timeline: > > 1. **Week 1 (Aug 20-24):** KYC documents (ID, address, bank, PAN) > 2. **Week 2 (Aug 25-31):** Legal agreement signed (3 copies, keep one) > 3. **Week 3 (Sep 1-7):** Razorpay payment, funds secured > 4. **Week 4+ (Sep 8+):** Properties go live, your room starts taking bookings > 5. **Month 1+ (Sep onward):** Monthly payout arrives in your bank (settle first checkout, then monthly recurring) > > Total onboarding: 3 weeks.

Closing (1 min): > Do you have any questions before I send over the KYC forms?

Common Objections & Responses

| Objection | Response | Deflect To | |-----|-----|-----| | "Can I lose money?" | Unlikely — your room cost is fixed, payouts vary. Worst case: low occupancy one month, smaller payout. We manage demand 24/7. | Occupancy track record | | "What if occupancy crashes?" | We have 10-15% occupancy buffer baked in. Plus, 3-property diversification means if one slows, others pick up. | Demand cycle proof | | "Is this legal?" | 100% legal. SEBI-compliant disclosures

...

— — —

Monthly Cost: [₹30k or ₹45k, fixed for 12 months] 6. **Payout Terms:** Monthly payouts based on actual bookings, after 1st guest checkout 7. **No Guaranteed Returns:** "Payouts are based on actual guest bookings and are NOT guaranteed. Expected annual returns are illustrative." 8. **Dispute Resolution:** Arbitration in Delhi under Indian law 9. **Signatures:** Investor, Ayushi (StayBid), Property owner witness

Timeline

Step	Day	Owner	Status	----- ----- ----- -----	Send agreement	8	Ayushi	☐	
Investor signs (3 copies)	8-9	Investor	☐		Investor returns 2 copies	9	Investor	☐	
Legal review + countersign	9	Legal	☐		Scans sent to investor	10	Ayushi	☐	
Files stored (1 digital, 1 hard)	10	Prince	☐						

— — —

PHASE 6: PAYMENT & ACCOUNT SETUP (Days 11-14)

Payment Instructions (Email to Investor)

> Subject: Payment Details — Secure Your Investment Now > > Hi [Name], > > Great! Your legal agreement is signed. Now let's secure your investment. > > **Amount to Pay:** ₹3,00,000 (three lakhs exactly) > > **Payment Method:** Razorpay (secure, verified, no additional fees) > > **Payment Link:** [Razorpay hosted checkout link, created by Prince] > > **What Happens After Payment:** > 1. Your payment is verified within 1 hour > 2. You receive a payment receipt + settlement letter > 3. Your room is "reserved" and added to your investor dashboard > 4. On September 8 (launch day), your room goes live for guest bookings > 5. Your first payout arrives after the first guest checks out (expected: mid-September) > > **Questions?** Call me anytime. > > Secure your spot: [Razorpay link]

Payment Verification (Prince)

After Investor Pays:

Step	Check	Owner	✓	----- ----- ----- ---	Razorpay order verified	amount ₹3L,
investor email	Prince	□		Settlement created	investor_id, amount, date	Prince
□	Investor dashboard updated	room reserved, can view	Claude/Admin	□	Confirmation	
email sent	receipt + settlement letter + next steps	Ayushi	□	Investor welcome package		
sent	property photos, room details, house rules	Kaaju	□			

— — —

PHASE 7: ACTIVATION (Day 15+, Post-Launch)

Investor Dashboard Access

Once payment is verified, investor receives email:

> Subject: Welcome to StayBid Circle! Your Investor Dashboard is Ready > > Hi [Name], > > Your investment is secured! Your investor dashboard is now active. > > **Log in here:** [/circle/me link] > > **What You Can See:** > - Your allocated room(s) > - Property photos + location > - Expected monthly payout (illustrative) > - Upcoming payouts schedule > - House rules + guest communication guidelines > > **What Happens Sep 8 (Launch Day):** > - Your room opens for bookings > - Guests can book your room on StayBid > - You start earning from day 1 > - First payout after first guest checkout > > **Questions? FAQs:** [Help center link] > > Welcome aboard!

Monthly Payout Process (Automated + Manual Interim)

Investor Payout Timeline:

| Timeline | Event | Status | |-----|-----|-----| | Sep 8-30 | Guests book, stay, checkout | Collecting | | Oct 1 | Cron `/api/cron/circle-settlement` runs | Settlement created | | Oct 1-5 | Settlement ledger entries generated (kind='guest_booking') | Owed | | Oct 5-10 | Prince manually verifies + marks as PAID | Paid | | Oct 10-15 | RazorpayX (or manual bank transfer) executes payout | Transferred | | Oct 15 | Investor receives ₹[amount] in bank account | Complete |

Investor Email (on Payout Date):

> Subject: Your September Payout — ₹[amount] Credited > > Hi [Name], > > Your September payout has been transferred to your bank account ending in [XXXX]. > > **Payout Breakdown:** > - Guest bookings: ₹[gross] > - Platform fee (12%): -₹[fee] > - Net to you: ₹[net] > - Your room cost: ₹[monthly_rate] > - Balance carried forward: ₹[balance] > > **View details:** [/circle/me earnings tab] > > Thanks for being part of StayBid Circle!

INVESTOR COMMUNICATION CALENDAR

| Week | Message | Owner | Medium | |-----|-----|-----|-----| | Week 1 | Intro + explainer video | Ayushi | WhatsApp | | Week 2 | Call + interest forms | Ayushi | Phone | | Week 2 | KYC docs request | Prince | Email | | Week 3 | Agreement signed + legal | Ayushi | Email | | Week 3 | Payment link ready | Prince | Email | | Week 4 | Payment confirmed | Prince | Email | | Day 1 (Launch) | Room goes live, earnings begin | Ayushi | Email + SMS | | Week 2 | First payout preview | Prince | Email | | Month 2 | First actual payout | Prince | Email + Dashboard | | Month 3+ | Monthly payout updates | Prince | Automated email + Dashboard |

FAQS FOR INVESTORS

Q: Is my money safe? A: Your ₹3L is held in a StayBid escrow account. It's legally secured under the investment agreement and covers your room's annual cost. At year's end, any remaining balance (or owed amounts) are settled.

Q: Can I withdraw before 12 months? A: No, there's a 1-year lock. This ensures properties run smoothly without sudden room shortages. After 12 months, you can withdraw or renew.

Q: How are payouts calculated? A: Monthly payouts = (guest bookings on your room – 12% platform fee – your room cost). If guests generate ₹50k, you get ₹50k – (₹50k × 12%) – ₹30k = ₹8.8k that month.

Q: What if my room doesn't get bookings? A: We manage demand 24/7 and optimize pricing. Plus, 3-property diversification (different peak seasons) smooths occupancy. If occupancy is low, payouts are lower — which is why we emphasize "illustrative, not guaranteed" returns.

Q: Can I sell my room/investment? A: Not during the 1-year lock. After 12 months, you can exit or renew. Resale to other investors is a future feature.

Q: What if I want to add more rooms? A: Great! After successful completion of Year 1, you can invest in additional properties or rooms in a second round.

Owner: Prince (Operations) + Claude (Technical) **Timeline:** Automated cron + manual interim admin payout **Audience:** Admin team, Prince (Ops), Investors (payouts)

Overview

Settlement is the REAL MONEY path: a guest books and pays → the booking is confirmed → a cron job runs every 30 minutes → settlement ledger entries are created (kind='guest_booking') → the admin marks them as PAID → investors receive monthly payouts.

This guide covers the **interim phase** (manual payout) and the **full automation** path (future RazorpayX integration).

THE SETTLEMENT ARCHITECTURE

High-Level Flow

1. GUEST BOOKS
Guest picks room → Pays via Razorpay → Booking confirmed (status=paid)
2. GUEST CHECKS OUT (after stay)
Checkout date passes → Booking fulfilled
3. CRON SETTLEMENT (* / 30 min)
/api/cron/circle-settlement runs
→ Finds confirmed bookings (checkOut ≥ today-120d)
→ For each booking: resolves per-night payee
→ Creates settlement_ledger rows (kind='guest_booking')
4. ADMIN MARKS PAID (manual interim)
Prince reviews settlement ledger
→ Confirms accuracy + bank details
→ Marks ledger rows as payout_status='paid'
5. INVESTOR RECEIVES MONEY (interim manual → future RazorpayX)
Payout executed (RazorpayX batch or manual bank transfer)
→ Investor gets ₹[net] in their account
→ Email notification sent

SECTION 1: SETTLEMENT LEDGER STRUCTURE

Table: `settlement ledger`

Column	Type	Purpose	Example	id	CUID	Unique ledger entry
sl_abc123def456	TEXT	Entry type	'guest_booking'	(only kind in M1)		
user_id	TEXT	Payee (investor/owner)	'investor_user_1'			
ref_id	TEXT	Booking reference	'booking_xyz123:investor_user_1'			
amount_owed	NUMERIC	Net payout (after 12% fee)	₹8,800			
payout_status	TEXT	owed → paid → transferred	'owed'			
metadata	JSONB	Booking details	{booking_id, nights, rate, fee, ...}			
created_at	TIMESTAMP	Entry created	'2026-09-01 10:30:45 UTC'			
paid_at	TIMESTAMP	Admin marked paid	'2026-09-05 14:20:00 UTC'			

Key Constraint: Idempotent Ledger Writes

```
sql
UNIQUE (kind, ref_id)
ON CONFLICT DO NOTHING;
```

Why this matters: If the cron runs twice (or 10 times) on the same booking, only ONE ledger row is created. No double-payouts, no duplicates.

— — —

SECTION 2: HOW THE CRON WORKS

Cron: `/api/cron/circle-settlement`

Trigger: Every 30 minutes (/30 *) **Auth:** Bearer token (CRON_SECRET) **Idempotency:** Per-booking via `uniq\_settlement\_kind\_ref`

Two-Pass Process

PASS 1: SETTLE

For each CONFIRMED, PAID booking from the past 120 days:

```
1. Fetch booking
SELECT id, bidId, checkOut, paidAmount, ... FROM bookings
WHERE status = 'confirmed'
AND paidAmount IS NOT NULL
AND checkOut >= now() - interval '120 days'
LIMIT 200; -- Batch limit

2. Resolve payee per-night
FOR each booking:
  FOR each night in the stay:
    payee = resolveNightlyPayees(bookingId, night);
    // Returns: investor_user_id (if owned block)
    //          OR owner_user_id (if hotel owner)

3. Create settlement_ledger row
INSERT INTO settlement_ledger
  (kind, user_id, ref_id, amount_owed, payout_status, metadata)
VALUES
  ('guest_booking', payee, 'booking_xyz:payee', net_amount, 'owed', {...})
ON CONFLICT (kind, ref_id) DO NOTHING; // Idempotent
```

Example Settlement Calculation:

```
Booking Details:
- Guest paid: ₹10,000 (for 2 nights)
- Platform fee: 12% = ₹1,200
- Net to owner: ₹10,000 - ₹1,200 = ₹8,800

Settlement Ledger Entry:
- kind: 'guest_booking'
- user_id: 'investor_user_1' (resolved from booking.assignedUnitId-owner_user_id)
- ref_id: 'booking_xyz123:investor_user_1'
- amount_owed: ₹8,800
- payout_status: 'owed'
- metadata: { booking_id: 'booking_xyz123', nights: 2, rate: ₹5000/night, fee_pct: 12 }
```

PASS 2: REVERSE (Refunds)

For each NOW-CANCELLED or REFUNDED booking with still-owed ledger rows:

```

1. Find cancelled bookings
SELECT id FROM bookings
WHERE status IN ('cancelled', 'refunded')
AND checkOut >= now() - interval '120 days';

2. Flip ledger rows to cancelled
UPDATE settlement_ledger
SET payout_status = 'cancelled'
WHERE ref_id LIKE 'booking_xyz:%'
AND payout_status = 'owed';

// Net result: originally-owed ₹8,800 is now cancelled (no payout)

```

Cron Failure Handling

| Scenario | Behavior | Recovery | |-----|-----|-----| | CRON_SECRET missing | 503
`cron\_auth\_unconfigured` | Set env var, redeploy | | No new bookings | 200 success, 0 ledger
rows created | Normal (wait for bookings) | | Booking lookup fails | 503 `database\_unavailable`
| Cron auto-retries next 30min | | Ledger INSERT fails | 503 (fails closed) | Check DB logs,
investigate | | Refund reversal fails | 503 (fails closed) | Manual reversal via admin panel |

SECTION 3: MANUAL PAYOUT FLOW (INTERIM)

Admin Panel: `/admin/circle-inventory`

Section: " Guest-booking Payouts Owed to Owners"

Part A: Settlement Ledger Viewer

Table Shows:

- Investor name + ID
- Booking ID + guest name
- Nights (stay duration)
- Room details
- Guest-paid amount
- Platform fee (12%)
- **Net to investor** (the row to pay)
- Payout status (owed/paid/cancelled)

Filters:

- Status (owed / paid / cancelled)
- Date range (createdAt)
- Investor name (search)
- Room / property (dropdown)

Part B: Manual Payout Action

Action: "Mark Paid"

```
SELECT settlement_ledger
WHERE payout_status = 'owed'
AND status NOT IN ('cancelled');

[Investor] [Booking] [Amount] [Mark Paid] [Action Log]
```

Clicking "Mark Paid":

1. **Validation:** Confirm investor bank details are on file 2. **Update:** `UPDATE settlement\_ledger SET payout\_status='paid', paid\_at=now()` 3. **Logging:** Log to audit trail (who paid, when, amount) 4. **Notification:** Email investor with payout receipt + bank confirmation

Audit Trail:

```
[2026-09-05 14:22:30 UTC] Prince marked sl_abc123 (₹8,800) as PAID
Investor: investor_user_1 | Booking: booking_xyz123
Bank: HDFC 1234 | Ref: Circle Settlement Sep 2026
```

Interim Process (August-October 2026)

Timeline: Until RazorpayX integration (estimated Oct 2026)

| Step | Owner | Schedule | Notes | |-----|-----|-----|-----| | Cron runs | Automated | */30 min | Creates settlement_ledger rows | | Admin reviews | Prince | Daily (EOD) | Checks for errors, invalid amounts | | Manual payout | Prince | 2x/week (Tue, Fri) | Marks rows as 'paid', triggers bank transfer | | Investor notified | Automated | Same day as mark-paid | Email receipt + settlement summary | | Bank transfer | Manual | EOD | Prince or finance team executes via bank portal |

KPIs Tracked in Admin Panel

Dashboard Summary:

Total Owed:	₹2,34,000 (5 investors)
Total Paid:	₹1,58,000 (3 investors)
Total Cancelled:	₹24,000 (1 refunded booking)
Average Payout:	₹46,800 per investor

Last Cron Run:	2026-09-05 10:30:00 UTC
Next Run:	2026-09-05 11:00:00 UTC
Ledger Entries:	25 (owed), 15 (paid), 2 (cancelled)

SECTION 4: INVESTOR PAYOUT EMAIL

Template: Monthly Payout Notification

Subject: "Your August Payout — ₹8,800 Credited to [Bank]"

Hi [Investor Name],

Your August payout has been successfully transferred to your bank account.

PAYOUT SUMMARY

Room:	Dhanaulti Room 5 (Deluxe)
Period:	August 1–31, 2026
Guest Bookings:	₹10,000
Platform Fee (12%):	–₹1,200
Your Room Cost:	–₹45,000

NET PAYOUT:	₹[amount] ✓
TRANSFERRED TO:	[Bank name] 1234
TRANSFER DATE:	[Date]
REFERENCE:	Circle Settlement Aug 2026

YEAR-TO-DATE SUMMARY

Total Received (Aug):	₹[YTD amount]
Investment Remaining:	₹[balance from ₹3L]
Months Left (on 1-yr lock):	4 months

QUESTIONS?

Email: circle@staybid.in
Call: +91 9876543210 (Prince)

Thank you for being part of StayBid Circle!

SECTION 5: HANDLING EDGE CASES

Case 1: Guest Cancels & Gets Refund

Scenario: Guest books, pays ₹10,000, then cancels before checkout.

Flow: 1. Booking status → `refunded` 2. Payment reversal initiated (Razorpay reverse) 3. Cron PASS 2 runs: finds cancelled booking 4. `UPDATE settlement\_ledger SET payout\_status = 'cancelled'` for that booking 5. Investor NEVER receives payout (no row created, or row cancelled) 6. Admin email: "Booking [ID] refunded — settlement cancelled"

Case 2: Multi-Night Stay Across 2 Investors

Scenario: Guest books 3 nights (Aug 30 – Sep 2). Aug 30 is investor_user_1's room, Aug 31 – Sep 2 is investor_user_2's room.

Flow:

```
Booking: 3 nights, ₹15,000 total

Per-night resolution:
  Aug 30 → payee = investor_user_1 → 1/3 of ₹15,000 = ₹5,000 gross
  Aug 31 → payee = investor_user_2 → 1/3 of ₹15,000 = ₹5,000 gross
  Sep 1  → payee = investor_user_2 → 1/3 of ₹15,000 = ₹5,000 gross

Settlement ledger rows:
  Row 1: investor_user_1, amount_owed = ₹5,000 - 12% = ₹4,400
  Row 2: investor_user_2, amount_owed = ₹10,000 - 12% = ₹8,800
```

Verification: Admin should see 2 separate payout rows per booking, totalling the full booking amount (minus fee).

Case 3: Partial Refund

Scenario: Guest paid ₹10,000, books 2 nights. Cancels 1 night (partial refund ₹5,000).

Flow: 1. Booking transitions to `partially\_refunded` (if supported) 2. Refund issued: ₹5,000 back to guest 3. Revised booking amount: ₹5,000 (for 1 night) 4. Cron: creates settlement ledger for 1 night only 5. Settlement amount: ₹5,000 – 12% = ₹4,400

Verification: Ledger shows revised amount, admin manually adjusts if needed.

Case 4: Admin Error (Mark Paid Twice)

Scenario: Prince accidentally clicks "Mark Paid" twice on the same ledger row.

Protection: Idempotency built-in

```
First click: payout_status: owed → paid, paid_at = 2026-09-05 14:22
Second click: Already paid, no change (OR warning: "Already marked paid")
```

Audit trail prevents double-payout:

```
[2026-09-05 14:22:30] Marked as paid
[2026-09-05 14:25:00] Click again → "Already paid on Sep 5"
```

SECTION 6: FUTURE: RAZORPAYX AUTOMATION

Full Money-Out Path (Estimated October 2026)

New Process:

```
Cron runs (* / 30 min)
↓
Creates settlement_ledger rows (kind='guest_booking', payout_status='owed')
↓
RazorpayX batch processor (* / 1 min) picks up owed rows
↓
Verifies investor bank details + amount
↓
Submits batch payout to RazorpayX API
↓
RazorpayX processes overnight or next business day
↓
Payout lands in investor bank account
↓
Cron marks payout_status='transferred', updated_at=now()
↓
Investor email: "Payout received ₹[amount]"
```

Interim → Full Automation Migration

Phase A (Aug-Sep 2026): MANUAL

- Cron creates ledger rows
- Admin marks 'paid' manually
- Bank transfer manual

Phase B (Oct 2026): SEMI-AUTOMATIC

- Cron creates ledger rows
- RazorpayX batch picks up 'paid' rows
- Auto bank transfer

Phase C (Nov 2026+): FULLY AUTOMATIC

- Cron creates ledger rows
- RazorpayX monitors for new rows, auto-marks 'paid'
- Auto bank transfer
- Zero manual admin touchpoints

RazorpayX Configuration Needed

```
Environment Variables (Railway):
RAZORPAYX_ACCOUNT_ID = "acc_[id]"
RAZORPAYX_API_KEY = "[key]"
RAZORPAYX_API_SECRET = "[secret]"

Database: investor_bank_details table
- investor_id
- account_holder_name
- account_number
- ifsc_code
- verified (boolean)
```

SECTION 7: MONTHLY FINANCE CHECKLIST

First of Every Month (Aug 1+)

By EOD, 1st of month:

Item	Owner	Status	Notes	----- ----- ----- -----	Cron summary report	Automated	✓
Email to Prince		Settlement ledger review	Prince	☐	Check for errors, cancellations		
Investor payout list	Prince	☐	Owed, pending, ready to pay		Bank details verification		
Prince	☐	Confirm no missing accounts		Razorpay reconciliation	Finance	☐	Match revenue to bookings
	Manual payouts executed	Prince	☐	Mark 'paid' + trigger transfer			Investor emails sent
Ayushi	☐	Monthly payout notifications					

By 15th of month:

- [] All Sep payouts transferred to investor accounts
- [] 0 outstanding 'owed' rows older than 7 days (except disputed)
- [] Monthly finance report to Sachin

SECTION 8: TROUBLESHOOTING

Issue: Cron Returns 503 `cron\_auth\_unconfigured`

Cause: `CRON\_SECRET` missing or incorrect

Fix: 1. Verify in Vercel: Settings → Environment Variables → Check `CRON\_SECRET` 2. If missing, add it (strong random string, ≥32 chars) 3. Redeploy: `git push` (Vercel auto-redeploys) 4. Test: `curl -H "Authorization: Bearer " https://staybids.in/api/cron/circle-settlement` 5. Expected: 200 `{ "processed": 0 }`

Issue: Settlement Ledger Shows ₹0 Payouts

Cause: No bookings yet, or cron hasn't run, or fee calculation is wrong

Fix: 1. Check: Are there CONFIRMED bookings? `SELECT COUNT(\*) FROM bookings WHERE status='confirmed'` 2. If yes, check checkout dates: `SELECT checkOut FROM bookings WHERE checkOut >= now() - interval '120 days'` 3. If still 0, manually trigger cron: `curl https://staybids.in/api/cron/circle-settlement?force=1` (if admin override available) 4. Check logs: `/admin/logs` → search 'circle-settlement'

Issue: Admin Marks Investor as 'Paid' But Investor Gets Email "Still Owed"

Cause: Email template reads old DB state, or cache is stale

Fix: 1. Refresh investor dashboard: F5 (browser cache clear) 2. Admin re-marks as 'paid': PATCH settlement_ledger set payout_status='paid' 3. Re-send email manually: `/admin/circle-inventory` → "Resend Receipt" 4. Verify in DB: `SELECT payout\_status FROM settlement\_ledger WHERE id='sl\_...'` → should be 'paid'

Issue: Double Payout (Cron Ran Twice, 2 Ledger Rows for Same Booking)

Cause: Cron ran twice (shouldn't happen, but manual intervention might trigger it)

Fix: 1. Check: `SELECT COUNT(\*) FROM settlement\_ledger WHERE ref\_id LIKE 'booking\_xyz%'` 2. Should be 1 row per booking. If >1, it's a bug (report to Claude) 3. Workaround: Manually DELETE duplicate rows (keep the first by created_at) 4. Mark the keeper row as 'paid', ignore the duplicate

SECTION 9: COMMUNICATION TEMPLATES

To Investors: Payout Delayed

Subject: Settlement Update — Your Payout is Processing

> Hi [Name], > > Your September payout is being processed and will arrive in your bank account by [date]. > > **Details:** > - Settlement created: Sep 1 > - Amount: ₹[amount] > - Status: Verified + Ready for transfer > - Expected arrival: [date] > > Thank you for your patience!

To Admin: Daily Cron Report

Email from automated cron summary:

```
DAILY SETTLEMENT REPORT – Sep 5, 2026

Cron runs: 48 (every 30 min)
Bookings processed: 12
Settlement rows created: 12
Errors: 0
Refunds reversed: 1

Total owed: ₹94,000 (12 investors)
Total paid: ₹58,000 (8 investors)
Pending manual mark-paid: 4 investors

Next action: Admin review + manual payouts (by EOD)
```

GLOSSARY

| Term | Definition | |-----|-----| | Settlement Ledger | Database table tracking all investor payouts (kind='guest_booking', status=owed/paid/cancelled) | | Cron | Automated job that runs every 30 min (`/30 \*`) to create settlement ledger entries | | Payout Status | State of a ledger entry (owed → paid → transferred) | | PASS 1 | Cron identifies new bookings + creates ledger rows | | PASS 2 | Cron reverses refunded bookings, flips ledger rows to 'cancelled' | | Idempotent | Safe to run multiple times; no duplicates (via UNIQUE constraint on kind, ref_id) | | RazorpayX | Future automated bank transfer platform (currently interim manual) | | 12% Fee | Platform commission frozen at settlement ledger creation |

Settlement & Payout Guide — Version 1 (August 17, 2026) StayBid Circle Model 1 — Phase 1 Execution

Launch Day Playbook

48h prep + Sep 8 10:00 AM launch + 30-day monitoring | Owner: Prince (Operations Lead)

StayBid Circle Model 1 — Phase 1: Launch Day Playbook

Launch Date: September 8, 2026 (Sunday) **Launch Time:** 10:00 AM IST **Primary Owner:** Prince (Operations Lead) **Backup Leads:** Kaaju (Properties), Ayushi P (Investor Relations)

EXECUTIVE SUMMARY

September 8 is the day 3 properties go LIVE and 10+ investors start earning from real guest bookings. This playbook ensures zero downtime, fast incident response, and investor confidence from Day 1.

Success Criteria:

- All 3 properties visible in guest browse (staysbid.in)
- First guest booking lands by 12:00 PM IST
- Cron settlement runs at 10:30 AM IST (demo run, no real bookings yet)
- All 10 investors receive go-live email
- 0 critical incidents, <5 min resolution for any issue

PHASE 1: PRE-LAUNCH (Days Before)

48 Hours Before (August 15, Friday)

10:00 AM IST — Full Team Standup

| Owner | Checklist | Status | |-----|-----|-----| | Prince | Verify all 3 properties in draft mode
| ☐ | | Prince | Cron `/api/cron/circle-settlement` test run | ☐ | | Kaaju | Confirm staff trained at
all 3 properties | ☐ | | Ayushi P | Investor go-live email ready (send Sep 8 at launch) | ☐ | |

Claude | Tech stack live check (Supabase, Razorpay, Firebase) | ☐ | Prince | Database backup created (pre-launch snapshot) | ☐ |

Expected Output: Green checklist, all systems tested, team confident.

If Any Item Red:

- ☐ Flag immediately to Sachin
- ☐ Do NOT proceed to launch until resolved
- ☐ Defer launch 24h if critical blocker

24 Hours Before (August 16, Saturday)

Infrastructure Checklist

| Item | Check | Owner | ✓ | |-----|-----|-----|---| | **Database** | Supabase 100% healthy | Claude | ☐ | | **APIs** | All endpoints responding (200 OK) | Prince | ☐ | | **Cron** | `/api/cron/circle-settlement` registered (*/*) | Prince | ☐ | | **Razorpay** | Test payments work end-to-end | Prince | ☐ | | **Email** | Notifications sending + not bouncing | Ayushi P | ☐ | | **Inventory** | Room availability calculated + visible | Claude | ☐ | | **Properties** | All 3 approval_status = DRAFT (hidden) | Kaaju | ☐ |

Expected Output: All green. Backup plan activated if 1+ red.

Backup Plan (If 1 Item Red):

- Option A: Fix and re-test (48h allowed)
- Option B: Defer launch 1 week, fix offline

Full Team Sync (August 16, Saturday, 2:00 PM IST)

Participants: Prince, Kaaju, Ayushi P, Claude, Sachin (approve final go/no-go)

Agenda (30 min): 1. Infrastructure green light (2 min) 2. Investor readiness (3 min) — 10 investors ready, payouts queued 3. Property readiness (3 min) — Staff trained, rooms allocated 4. Communications ready (2 min) — Emails drafted, no typos 5. Incident plan rehearsal (5 min) — Test one scenario 6. Final Q&A (5 min) 7. GO/NO-GO decision (5 min)

Decision:

- ☐ **GO** — Proceed to launch Sep 8, 10:00 AM
- ☐ **NO-GO** — Defer, reason: [_____]

PHASE 2: LAUNCH DAY (September 8, Sunday)

Pre-Launch Window (9:30-10:00 AM IST)

9:30 AM IST — Ops Team Early Standup (30 min)

Participants: Prince, Kaaju, Claude

| Owner | Task | Notes | ✓ | |-----|-----|-----|---| | Prince | Check Supabase + Railway status pages | Any incidents? | ☐ | | Prince | Verify all systems responding (curls) | 200 OK on all | ☐ | | Claude | Recheck Spine data (base rates, live prices) | Latest from DB | ☐ | | Kaaju | Confirm all staff on standby at 3 properties | Ready for guests | ☐ | | Prince | Slack channel pinned (escalation link) | #circle-launch active | ☐ | | Ayushi P | Investor email drafted + queued to send at 10:15 AM | Ready to blast | ☐ |

Expected Output: Zero red items. System stable, team ready.

If Any Red:

- [] Declare incident (use Escalation Tree below)
- [] Target resolution: 30 min
- [] If can't resolve, defer launch 24h
- [] Notify Sachin + investors (delay email)

9:30 AM IST — Pre-Launch Email to Investors (Scheduled)

Sent automatically at 9:30 AM, delivered by 10:00 AM:

Subject: StayBid Circle Is LIVE in 30 Minutes!

Hi [Investor Name],

Your properties are going LIVE at 10:00 AM IST.

What's happening:

- Your rooms open for guest bookings
- Live pricing + availability active
- First bookings expected within hours
- Your earnings journey begins TODAY

Dashboard ready: [/circle/me link]

Next steps:

1. Log in to your investor dashboard
2. View your allocated room(s)
3. Watch for guest bookings in real-time

Questions? Reply or call Prince: +91 9876543210

Let's GO!

LAUNCH (10:00 AM IST — Live Go-Time)

10:00 AM IST — PROPERTIES LIVE

Action 1: Flip All 3 Hotels to 'approved'

```
PATCH /api/admin/hotels/{hotel_id}
{ "approval_status": "approved" }
```

Hotels to flip:

- hco_dhanaulti_001
- hco_rishikesh_001
- hco_mussoorie_001

By 10:02 AM, verify:

- [] All 3 properties visible in `/api/discover/feed`
- [] Individual rooms bookable
- [] Guest-facing pricing (MRP, not investor cost) showing correctly
- [] Images loading

Action 2: Send Go-Live Email to Investors

Subject: You're LIVE! Earnings Start NOW

Hi [Investor Name],

.

Your StayBid Circle investment is officially LIVE!

Your room(s) are now open to guests. Here's what to expect:

Dashboard: [/circle/me] - See bookings in real-time

First payout: After first guest checkout + cron settlement

Alerts: You'll get notified on every booking + payout

The "Always in Season" model is working:

- Dhanaulti: Peak season begins (spring holidays)
- Rishikesh: Autumn season active
- Mussoorie: Summer escape season strong

Expect your first guest booking within 2 hours.

Questions? Call Prince: +91 9876543210

Welcome to the circle!

Send at 10:05 AM IST

Peak Window (10:00 AM-12:00 PM IST)

10:00-10:30 AM: First 30 Minutes (Stabilization)

| Owner | Task | Target | Status | |-----|-----|-----|-----| | Prince | Monitor Supabase logs (errors, anomalies) | 0 errors | ☐ | | Prince | Check Razorpay webhook (payment confirmations) | >0 payments | ☐ | | Claude | Monitor API response times (p99 latency) | <500ms | ☐ | | Ayushi P | Monitor investor emails (delivery success) | 100% | ☐ | | Kaaju | Check property booking inflow (telemetry) | >0 bookings | ☐ |

Expected: Properties visible, guests browsing, 0 errors.

10:30 AM IST — Cron Settlement Test Run

```
GET /api/cron/circle-settlement
Authorization: Bearer
```

Expected Response:

```
json
{
  "status": "success",
  "processed": 0,
  "ledger_rows_created": 0,
  "message": "no confirmed bookings yet",
  "next_run": "2026-09-08T11:00:00Z"
}
```

If Cron Fails:

- [] Check `CRON\_SECRET` in env
- [] Check DB connectivity
- [] Escalate (see Incident Response below)

10:30-11:00 AM: First Hour Monitoring

| Owner | Metric | Target | Status | |-----|-----|-----|-----| | Prince | Supabase CPU + memory | <70% | ☐ | | Prince | API error rate | <0.1% | ☐ | | Claude | Database queries (avg latency) | <200ms | ☐ | | Kaaju | Guest booking count | ≥1 | ☐ | | Ayushi P | Investor dashboard access count | >5 | ☐ |

11:00 AM-12:00 PM IST: Mid-Morning Surge

Expected Activity:

- 5-10 guest bookings (first wave)
- Investor dashboard traffic (+30% from baseline)
- Email notifications flowing (bookings, confirmations)

Monitoring During Surge:

| Metric | Threshold | Action | |-----|-----|-----| | Supabase CPU | >80% | Alert Prince, consider scaling | | API error rate | >1% | Investigate, escalate if >5% | | Booking latency | >2s | Log, monitor for pattern | | Email bounce rate | >5% | Check email service, resend |

By 12:00 PM IST Target:

- ☐ ≥5 guest bookings
- ☐ All 3 properties visible + bookable
- ☐ 0 critical incidents
- ☐ Investor dashboard live + accessible
- ☐ Cron ran successfully (10:30 AM run)

Mid-Day Sync (12:00 PM-12:30 PM IST)

12:00 PM IST — Executive Check-In (15 min)

Participants: Prince, Kaaju, Ayushi P, Sachin

Agenda: 1. Launch status (3 min) — Green/yellow/red summary 2. Metrics review (3 min) — Bookings, errors, performance 3. Investor feedback (3 min) — Any complaints? 4. Next 12 hours (3 min) — Monitoring, handoff plan 5. Celebration ≠ relaxation (3 min) — Stay alert until 48h

Decision:

- [] **GREEN** — Proceed normally, reduced monitoring after 6 PM
- [] **YELLOW** — Keep elevated monitoring, review at 6 PM
- [] **RED** — Incident response (see below)

PHASE 3: POST-LAUNCH MONITORING (Sep 8-14)

First 24 Hours (Sep 8, 10:00 AM-Sep 9, 10:00 AM)

Schedule:

- 10:00 AM: Launch + 1st surge
- 2:00 PM: Mid-day check-in (booking count, cron success)
- 6:00 PM: Evening report (investor feedback, issues)
- 10:00 PM: Night handoff (escalation for overnight)
- 10:00 AM next day: 24-hour debrief

Daily Metrics to Track:

Metric	Sep 8 Target	Sep 8 Actual	Notes
Guest bookings	≥5	[_]	All properties
Settlement ledger rows	0	[_]	Too early (no checkouts)
Investor logins	>10	[_]	Dashboard access
Email errors	<2%	[_]	Notifications
API errors	<0.5%	[_]	5xx responses
Cron runs	3 (10:30, 11:00, 11:30 AM)	[_]	All 200 OK

First 7 Days (Sep 8-14)

Daily Standups (10:00 AM, 15 min)

Day	Owner	Focus
Sep 8	Prince	Launch day recap + issues
Sep 9	Prince	Investor onboarding, first checkouts expected
Sep 10	Kaaju	Property ops feedback, staff issues
Sep 11	Ayushi P	Investor sentiment + support tickets
Sep 12	Claude	Performance metrics + optimization
Sep 13	Prince	Settlement ledger review (first real payouts)
Sep 14	All	Week 1 retrospective + Week 2 plan

Milestone Events:

Date	Event	Owner	Action
Sep 8	Properties go live	Prince	✓
Sep 9	First guest checkout (estimated)	Kaaju	Verify settlement triggers
Sep 9-11	Settlement cron creates first ledger rows	Claude	Audit ledger accuracy
Sep 12	Admin marks first payouts as 'paid'	Prince	Execute manual bank transfer
Sep 14	Investor receives first payout email	Prince/Ayushi P	Celebrate!

First 30 Days (Sep 8-Oct 8)

Weekly Syncs (Every Friday, 10:00 AM)

Week	Date	Attendees	Agenda
1	Sep 15	All	Launch week debrief
2	Sep 22	All	Booking velocity, occupancy trends
3	Sep 29	All	Settlement accuracy, payout completeness
4	Oct 6	All	Month 1 review, scaling plan

INCIDENT RESPONSE PLAYBOOK

Severity Levels

Level	Definition	Response	Owner
CRITICAL (Red)	Properties not visible OR payment failures OR cron down	5 min target	Prince + Claude
HIGH (Yellow)	Booking delays (>10s) OR email errors (>10%) OR property partial outage	15 min target	Prince
MEDIUM (Orange)	Single investor complaint OR feature bug (non-core)	1 hour target	Ayushi P / Kaaju
LOW (Blue)	UI polish OR documentation	EOD target	Anyone

Incident Response Tree

CRITICAL INCIDENT DETECTED:

```

1. IDENTIFY
↓
What's down? Property browse? Payment? Cron?
↓
Page alerting ON (escalate to on-call)

2. TRIAGE (2 min)
↓
Prince: Check Supabase status page + logs
Claude: Check Railway backend + logs
↓
ROOT CAUSE: Database? API? Third-party?

3. COMMUNICATE (2 min)
↓
Investor email: "Investigating property outage – ETA 10 min"
Slack: #circle-launch with incident details
↓
Set incident channel timer (decision point every 5 min)

4. MITIGATE (5 min or escalate)
↓
Option A: Quick fix (restart service, flip setting)
Option B: Rollback (previous working version)
Option C: Failover (switch to backup environment)
↓
If 5 min elapsed, escalate to Sachin

5. VERIFY (2 min)
↓
Test the fix (manual booking, cron run)
↓
All green? → RESOLVED

6. COMMUNICATE RESOLUTION (1 min)
↓
Investor email: "Issue resolved at [time], bookings re-enabled"
Slack: #circle-launch update
↓
Post-incident review in 24h

```

Critical Incident: Properties Not Showing

Symptoms: Guest browse `/api/discover/feed` returns no Circle properties

Investigation (3 min): 1. Check hotel status: `SELECT approval\_status FROM hotels WHERE owner\_type='host\_circle'` - If DRAFT → flip to approved (accidental rollback?) - If approved → check visibility filters

2. Check database: Are rooms allocated? `SELECT COUNT(\*) FROM hotel\_room\_units WHERE hotel\_id IN (...)` - If 0 → rooms not allocated (provision step failed) - If >0 → check inventory availability

3. Check API: Does ``/api/hotels/hco_dhanaulti_001`` return 200? - If 404 → hotel doesn't exist (creation failed) - If 500 → database error

Fix Options:

- Option A: Hotels are in DRAFT → ``PATCH approval_status='approved'``
- Option B: Rooms not allocated → Re-run provisioning step
- Option C: API error → Restart Railway backend

If <5 min to resolve: Implement fix, test, communicate resolution

If >5 min: Escalate to Sachin, consider deferring launch 24h

Critical Incident: Razorpay Payment Fails

Symptoms: Guest clicks "Book" → payment says "Processing" → never completes

Investigation (3 min): 1. Check Razorpay status: <https://razorpay.com/status> - If down → wait + retry (not our fault) - If up → check API integration

2. Check webhook: Are payments being verified? ``/api/razorpay/verify`` logs - If webhook missing → re-register in Razorpay dashboard - If webhook 503 → API down, restart

3. Check env vars: Is ``NEXT_PUBLIC_RAZORPAY_KEY_ID`` set? - If not → payment button won't show - If yes → test payment flow manually

Fix Options:

- Option A: Razorpay down → customer retry (notify investors: "Temporary payment delays")
- Option B: Webhook down → restart Vercel deployment
- Option C: Env var missing → set in Vercel, redeploy

If <5 min to resolve: Implement + test

If >5 min: Accept guest bookings offline (email + manual payment), settle later

Critical Incident: Cron Settlement Down

Symptoms: Cron ``/api/cron/circle-settlement`` returns 503

Investigation (2 min): 1. Check auth: Is ``CRON_SECRET`` set? ``curl -H "Auth: Bearer " /api/cron/circle-settlement`` - If 401 → secret wrong - If 200 → working

2. Check database: Can Supabase be reached? (test query from Railway) - If timeout → DB down - If 200 → DB fine

3. Check logs: ``/admin/logs`` → search 'circle-settlement' - Look for errors in last 5 min

Fix Options:

- Option A: Secret wrong → Update in Vercel env, redeploy
- Option B: DB down → Wait for Supabase recovery (monitor status page)
- Option C: API error → Restart Railway backend

If <5 min to resolve: Implement fix

If >5 min: Cron will auto-retry every 30 min; settlement can be manual later

ESCALATION CONTACT TREE

Severity CRITICAL:

```
First response: Prince (Operations Lead)
├─ Can't resolve in 5 min?
│   └─ Escalate to Sachin (CEO)
│       └─ Can't resolve in 15 min?
│           └─ Escalate to Claude (Tech Lead, advisory)
│               └─ Consider: defer launch 24h OR accept manual workaround
```

Contact Details:

Role	Name	Phone	Email	----- ----- ----- -----	Prince	Prince	[phone]
prince@staybid.in	Ayushi P	Ayushi	[phone]	ayushi@staybid.in	Kaaju	Kaaju	[phone]
kaaju@staybid.in	Claude	Claude	(advisory)	claude@staybid.in	Sachin	Sachin	[phone]
sachin@staybid.in							

Escalation Triggers:

- 5+ consecutive errors
- Any CRITICAL level incident
- >30 min unresolved issue
- Investor complaints (>3 same issue)

GO-LIVE SUCCESS CRITERIA

Day 1 (Sep 8)

- [x] All 3 properties visible in guest browse
- [x] ≥ 5 guest bookings
- [x] Cron runs 3+ times, 0 errors
- [x] All 10+ investors receive go-live email
- [x] Investor dashboards accessible
- [x] 0 critical incidents
- [x] < 5 min resolution for any issue

First 24 Hours (Sep 8-9)

- [x] ≥ 10 total guest bookings
- [x] ≥ 1 guest checkout (settlement trigger)
- [x] Settlement ledger rows created (cron PASS 1)
- [x] Investor emails sent (payout notifications)
- [x] $< 2\%$ payment error rate
- [x] $< 1\%$ API error rate

First 7 Days (Sep 8-14)

- [x] ≥ 50 total guest bookings
- [x] All 10 investors receive ≥ 1 payout email
- [x] Settlement accuracy verified (12% fee, per-night attribution)
- [x] 0 duplicate payouts
- [x] 0 investor escalations (except expected questions)
- [x] Booking velocity stable (trend analysis)

First 30 Days (Sep 8-Oct 8)

- [x] ≥ 300 total guest bookings
- [x] All investors receive monthly payout
- [x] Average occupancy $\geq 60\%$ (expected: 70%)
- [x] Average investor satisfaction $\geq 4/5$ stars
- [x] 0 money-path regressions

POST-LAUNCH DEBRIEF (Sep 14, 10:00 AM)

30-min all-hands review:

1. **What Went Well (10 min)** - Smooth launch? ✓ - Metrics hit targets? ✓ - Investor feedback positive? ✓
2. **What Could Improve (10 min)** - Any bottlenecks? - Unexpected issues? - Team friction?
3. **Metrics Review (5 min)** - Bookings, payouts, errors (compare vs targets)
4. **Week 2 Plan (5 min)** - Scale to 20 investors? - Add 4th property? - Any fixes needed?

APPENDIX: QUICK REFERENCE

Critical Endpoints (Test Before Launch)

```
bash
```

```
curl https://staybids.in/api/health → 200
```

```
curl https://staybids.in/api/discover/feed?city=dhanaulti → 200, >0 hotels
```

```
curl -X POST https://staybids.in/api/bids/checkout → 200, razorpay_order_id returned
```

```
curl -H "Authorization: Bearer " https://staybids.in/api/cron/circle-settlement → 200
```

```
curl https://staybids.in/admin/circle-inventory (with admin token) → 200
```

Environment Variable Checklist

- [x] `NEXT\_PUBLIC\_RAZORPAY\_KEY\_ID` → active test/live key
- [x] `RAZORPAY\_KEY\_SECRET` → set in Vercel server secrets
- [x] `CRON\_SECRET` → strong random ≥ 32 chars
- [x] `JWT\_ACCESS\_SECRET` → shared with Railway, ≥ 32 chars
- [x] `SUPABASE\_SERVICE\_ROLE\_KEY` → only for admin gate

STAYBID CIRCLE LAUNCH — EMERGENCY HOTLINE
